them was their unhuman apathy and utter lack of interest.... Although we came upon them unexpectedly, and although, as they told us later, they had never before seen white people, nevertheless, neither of them showed the slightest astonishment or interest in our appearance; both glanced up for a second, and then cast down their eyes, and continued silently shelling the seeds of the lotus pods beside them, and stirring the simmering pot over the fire. Near the other huts, women and children were occupied at the same task; some were sitting on the ground around a pile of lotus pods, others were attending to the cooking. At first the children seemed a little frightened at us, but contrary to expectation, did not rush off to the jungle....

"At the time of our visit there were but three men and seventeen women and children in Makulugulla; these were distributed in five shelters or huts. The chief's house was made of four upright posts and a flat thatched roof of palm leaves, but without walls or flooring. The other huts were shaped like A-tents, one was thatched with coarse grass, the other covered with large circular leaves of the lotus. The remaining two huts were shaped like wall tents, the roofs of grass or palm-leaf thatch, and the walls of bark. They all had dirt floors, and not one of them was over eight feet square. In three of the huts the utensils, such as earthen pots, baskets, gourds and mats, were piled on the ground at one end; in only two were there any shelves. The floor of each, however, was neatly swept, and even outside the huts, where all but the aged and the very young slept, the ground had been swept clear of leaves and twigs.

"The cooking was all done out of doors, at a fire-place consisting of three stones; and the cook was honoured by having a seat, either a block of wood or the dried skin of the Axis deer or the Muntjac. We were also surprised to see their providence, in that they had quite a good-sized bundle of dry firewood on store in the huts. We expected to find the village reeking with refuse and decaying game, of which we heard that they were fond, but the place was free from smells, and really clean. The jungle at this spot was composed of large trees and

136 The grass in the glades was so tall that it covered us entirely. One's only chance of encountering game lay at the forest margins, or in the infrequent patches of burnt ground, overspread with the tender apicous shoots of which the chital are fond. Parrots and doves broke the stillness of the evening with their crooning. Startled quails whirred from our feet crying vociferous caution to their crouching young, and sometimes we would flush a *pathan kukula*, a species of partridge. But the note that accorded most with the brooding genius of the place, was the mournful, incessant 'ho-ho, ho-ho' of the *botua-kapan*, a cuckoo which, try as we might, we failed to see.

361 The next morning, provided with a small langur we shot on the way, we visited the Henebedde Veddas in their homes. Handuna's hut 231 stood at the foot of a densely wooded hill. There were a few cattle about which the Veddas tended for a consideration from the Sinhalese; and, what was even more unexpected, we found here a couple of hens with excellent broods; for, even the Sinhalese of these parts, as we learnt to our cost, kept no fowls. In these pursuits lie the nuclei that bid fair to tie nomadic hunters to fixed abodes.

342 Handuna's hut was a long low structure of wattle and bast thatched with straw, and partitioned into three or four dark rooms, occupied by his family and those of his sons-in-law. At one end of the building was an [281 open living-room in which we were entertained with deer skins for seats. 362] Slung from the eaves, at the other end of the hut, was a gourd, the mouth 231 of which was plugged with wax pierced with two small holes, through which bees busily entered and emerged. As I focussed my camera on this interesting example of Vedda apiculture, the enterprising showman naively remarked that a gentleman had once given him a rupee for that picture; but he might have spared the hint for the good it brought him.

343 Standing a little apart from the main hut, was a squat, kennel-like [84] structure for the segregation of women, during their monthly indis- [171] position. This feature is universal among jungle folk, whether Vedda, half-Vedda, Sinhalese, or Tamil. These sheds, barely sufficient for an individual to sit or lie crouched in, are often overgrown by jungle, and only crudely protected with bark-slats or deer skins; they have a fire-place at the open entrance; sometimes they are more hygienically built over trestles. Considering the poor protection they afford, and their nearness to the forest around, it must require some fortitude on the part of those occupying them, especially at night.

252 We now saw the monkey we had brought prepared for food. A slow fire was kindled in the garden; on this the carcase was placed, and turned over until well singed, emitting a most appetising odour. The smooth stone on which Handuna had up to now been seated, and which did service as seat or platter as occasion demanded, was requisitioned; the half-roasted animal was placed on it, disemboweled, and quartered with the blade of an arrow. A dog, that had been awaiting the opportunity, feasted on the offal in full view. The head was severed and split in half, [824 the limbs, dismembered, and the trunk broken flat. The various frag- 264] ments were then put back to roast. When all was ready, dainty morsels were served out to us on broad *kenda** leaves (the usual plates of these 262 people), with the polite request that we must eat first. A fragment of liver done to a turn, and a dainty hand with the charred little finger

*Macaranga tomentosa.

and ear-rings and necklaces. Sober, wistful children ate raw melons or fragments of *kurrukkan* cake as hard as brick, plastered over with flies.

Indian corn and *kurrukkan*, the staple food of these people, are prepared in a variety of ways. After soaking in water for twenty-four hours, they are reduced to flour, *kurrukkan* on grind-stones, maize with pestle and mortar, and eaten in one of three forms—*talapa*, *roti*, or *pittu* appetised with pungent sambols.

Let us look into one of their homes. It is windowless and dark, except for the light that comes between the bark-slats in a hundred dazzling shafts. There are two rooms; the inner small and narrow, the outer a larger living room with a single doorway protected by a two foot fence—a provision for the children. At one corner is a hearth underlying a low trestle bridging the wall angle, for drying flesh; at another a cage-work containing earthen pots and garish Allervale cups and plates. Hanging about the walls are rolled mats, oil bottles, baskets and clusters of sheathed corn cobs. Head-high is an open ceiling containing a jumble of things such as an old umbrella, wicker baskets, large earthen pots and gourds. On the floor is a large grind-stone, and littered about are shreds of mats, a deer skin or two, dirty cloths, a small pillow, a betel bag, a rush broom and a polished plank—certainly the most primitive chair imaginable. There is also a coconut-scraper of curious design, made of a serrated iron disc wedged into the outstanding limb of a triple-branched stem resting on its Y-shaped arms. Such are the appointments of a *chena* Vedda's domicile.

These communal dwellings stockaded against beast aggression in the heart of wild nature, the watch huts on the trees, the hallos all night, proclaim the incessant struggle between man and the animals in whose strong kingdom he is only a small unit. But for its inalienable hardships the life of this people makes a homely appeal to the human heart. Nature a capricious giver, bestows now abundantly now sparingly, and he who would wrest a living from her must have supple thews and great endurance.

Henanagalla was a place of antiquarian interest a few miles from Dolagalwella. On the summit of a large low rock in an undulating glade stood a broken dagaba completely obscured by a growth of big trees and scrub. Desultory worshippers had trussed up a slab for offerings of wild flowers. A low wall of hewn granite blocks surrounded the structure, and a half buried monolith or two peeped out of the ruin.

Descending from here and working round through a tangle of brush-wood, we came to a commodious cave quite forty paces long, showing the remains of enclosing and partitioning walls, a slotted stone for the support of a pillar and a large flat *puja* stone.

Besides these evidences of ancient occupation, were signs of more recent use. The cave was obviously a resort of monitor hunters. There were the long sticks with which the savoury creatures had been poked out of deep lairs, and cooking frames where they had been roasted. The floor was littered with their dry heads, corn-cobs and nut-shells.

But more interesting than all this were the crude drawings that adorned the inner dome. Here was a veritable gallery of untutored art, wrought with finger for brush and a mixture of ash and water for paint. There were the most primitive representations imaginable of leopards, elephants
